Space Tourist (Customer) – UI Mockups

This page presents the Space Mate user interface from the perspective of the Space Tourist (Our Customer Persona). It shows how scheduling, monitoring and coordination are supported through the system.

Welcome Screen

This welcome screen serves as the central entry point for the users preparation jpurney, providing an overview of all required steps and progress toward mission readiness.
It welcomes the user and lets him actively “start his journey”, leading to the next page.

This page now visualizes the structured onboarding process, guiding users through all of the required preparation steps towards takeoff. This helps our customer to stay on track and not get frustrated by seeing too many steps.

The customer then gets greeted by the Space Mate AI, which leads him to the first step, filling out the questionnaire for further steps. The User gets lead to an AI driven chat.

The User sends his filled questionnaire back in the chat. The AI analyzes it, looks for gaps or unclarities.
If there are further questions, the AI Chatbot gets back to the customer, to find more information. As he gets this information, he will then proceed to forward it. Now, the customer has completed step one.

Appointment – Center

This page provides a centralized view of appointment scheduling within the preparation process, allowing users to propose and manage preferred time slots.
On the upper half, the User gets greeted, and immediately sees his appointments required, with a state.
The red marked ones show where they proposed, but they haven't been scheduled by the PM yet. The green state shows that the appointment has already taken place, and yellow implicates that the appointment has been approved by the PM.

On the Calendar, the User can propose his time slots available, after he clicked on one Doctor button.
After he has chosen his proposals, he clicks the blue button "send" .
On the right, under "My appointments" , he sees the states of the appointments listed. To see when his appointment takes place, the user clicks on the specific Doc, where the date is then shown. Below, in the same box, our user sees his progress, how much completed, what is still required.

Once all the steps are completed, the user gets a “final screen”, where he is told that he is now finished with Onboarding.

The User gets a chance to give a feedback, and is still able to review his documents, medical reports, etc under “Documents” above.
